

1. Organize parts as shown in Figure 1, with spring-loaded pins pointing out.

2. Insert **INSIDE** leg into short/front of print rack. (Note: if pins do not pop into holes of print rack, rotate the leg slightly.)

Insert **OUTSIDE** leg into tall/back of print rack. (Note: if pins do not pop into holes of print rack, rotate the leg slightly.)

3. Repeat for other side.

Note: A small amount of adjusting may be made to the rubber feet caps to help level the print rack by twisting the rubber feet caps with pliers. Use a cloth or towel to protect the feet during adjustment.

The lightweight print racks become more steady as prints are added.
